

Front-end Developer

Mind4Energy is a young and dynamic company, providing a fully integrated monitoring tool for renewable energy projects. We are currently monitoring over 200 renewable energy installations in Europe and Asia. In order to further develop our monitoring solutions we are currently looking for a front-end developer.

Job description:

- You are responsible for the front-end development of different micro-services in the Mind4Energy software stack deployed on AWS
- You think with us about software architecture to get the code to the next level
- You are working in a small team of Node.JS, Java, Python... developers
- You can find a good balance between applying fundamental changes and solution oriented thinking
- You are applying agile product development methodologies (GIT, Docker, Jira...)

Skills:

We are looking for a person with the following competences:

- You have a Master's degree in IT or equal by experience
- You are an experienced hands-on programmer
- You are an expert in usability
- You have knowledge of design patterns
- You have knowledge of recent web technologies & frameworks
- You have ample experience with version management
- You have experience with web services & industrial integrations
- You have experience with the development of large scalable SaaS platforms
- You are open to new technologies

Our offer:

An exciting, varied and challenging job within a dynamic team with the opportunity to grow together with us in the fast growing renewable energy market.
