Senior software developer

Mind4Energy is a young and dynamic company, providing a fully integrated monitoring tool for renewable energy projects. We are currently monitoring over 200 renewable energy installations in Europe and Asia. We are currently looking for an experienced developer to join our software development team.

Job description:

- You are responsible for the development of different micro-services in the Mind4Energy software stack deployed on AWS
- You think with us about (and get the) software architecture to get the code to the next level
- You are working together with a passionate team of Java, Node.JS, Python… developers.
- You can find a good balance between applying fundamental changes and solution oriented thinking
- You are applying agile product development methodologies (GIT, Docker, Jira…)

Skills:

We are looking for a person with the following competences:

- You have a Master's degree in IT or equal by experience
- You are an experienced hands-on programmer
- You have operational knowledge Amazon Web Services
- You have operational knowledge of data streaming (Apache Kafka)
- You have experience with database technology (RDBMS, timeseries DB, graphe DB)
- You have ample experience with version management
- You have experience with web services & industrial integrations
- You have experience with the development of large scalable SaaS platforms
- You have a good knowledge of OO software design & design patterns
- You have knowledge of recent web technologies & frameworks
- You are open to using new technologies

Our offer:

An exciting, varied and challenging job within a passionate and driven team with the opportunity to grow together with us in the fast growing renewable energy market.
