

DevOps Engineer

Mind4Energy is a young and dynamic company, providing a fully integrated monitoring and (remote) control software tool for renewable energy projects.

We are currently monitoring over 200 renewable energy installations in Europe and Asia.

In order to further develop our software solutions we are currently looking for a **DevOps engineer**.

Job description

You are responsible for the **management of the IT infrastructure for our Cloud services** and related support tools. In doing so, it will be necessary to **work closely together with other team members**, our application development group and our PLC team.

You are also responsible for the **IT infrastructure management that is on-site** at customer locations.

You are constantly **analysing risks and possible impact of the changes**, drawing up the necessary technical documentation.

You are responsible for the **operational (pro-active) monitoring** of the environment health and take/coordinate action where needed

The following key-technologies are already in use

- Server infrastructure: **Cloud IaaS, AWS, Linux**
- Databases: **MySQL, Neo4J, Mongo, InfluxDB**
- Big data: **Kafka streaming clusters**
- Continuous Integration Tools: **Jenkins, Bitbucket Pipelines**
- Application virtualisation: **Docker containers & OpenShift**
- Monitoring: **Zabbix, Prometheus, Grafana**
- DevOps Tools: **Puppet, Terraform, Python, bash scripts etc..**
- Network: **VPC, VPN**

Our offer

An exciting and **challenging** job within a dynamic team, in a **high-tech, innovative and international context** in the fast growing **renewable energy** market.

If you are interested in this job offer, please send your resume to kim.inghels@mind4energy.com
