

QA Engineer

Mind4Energy is a young and dynamic company, providing a fully integrated monitoring and (remote) control solution for renewable energy projects.

We are currently monitoring over 200 renewable energy installations in Europe and Asia.

In order to further develop our software solutions we are currently looking for a **QA engineer**.

Job description

You will be responsible for the A to Z testing at system level of our soft- and hardware applications by

- drawing up the entire **test architecture**
- **designing** clear test plans based on **functional specifications**
- **executing** the test plans and **following up on reported defects**
- Assuring the **quality** of our applications

You will be working in a passionate team of back-end, front-end and PLC developers where the **SCRUM method is diligently applied**.

We are looking for a person with the following competences

You are a passionate and **hands-on** test engineer, a **quick learner** and you thrive in a **collaborative** and **iterative development** environment.

You have constant focus on **quality**, a **solution-oriented attitude** and you can rely on at least **2 years of experience** in software application testing.

You are a **strong communicator** and you don't hesitate to reject poor performing products.

Our offer

An exciting and **challenging** job within a dynamic team, in a **high-tech, innovative and international context** in the fast growing **renewable energy** market.

If you are interested in this job offer, please send your resume to recruitment@mind4energy.com
